

-2-

IN THE CLAIMS:

Pending claims follow:

1. (Currently Amended) A method for generating a single record reflecting multiple services for accounting purposes, comprising:
- (a) identifying a plurality of services carried out over a network;
- (b) collecting data describing the plurality of services; and
- (c) generating a single record including the collected data, wherein the single record represents each of the plurality of services;
- wherein the services include at least two services selected from a group consisting of a hypertext transfer protocol (HTTP) session, an electronic mail session, a multimedia streaming session, a voice over Internet Protocol (IP) session, a data communication session, an instant messaging session, a peer-to-peer network application session, a file transfer protocol (FTP) session, and a telnet session;
- wherein the data is collected utilizing an enhancement procedure defined utilizing a graphical user interface by:
- listing a plurality of available functions to be applied in real-time prior to end-user reporting,
- allowing a user to choose at least one of a plurality of fields, and
- allowing the user to choose at least one of the listed functions to be applied to the chosen field in real-time prior to the end-user reporting.
2. (Original) The method as recited in claim 1, and further comprising sending the single record to a Business Support System.

-3-

3. (Original) The method as recited in claim 1, wherein the single record is used to bill at least one recipient of the services.
4. (Original) The method as recited in claim 1, wherein the plurality of services are received by a single party associated with the single record.
5. (Original) The method as recited in claim 4, wherein the single party is identified in the record.
6. (Original) The method as recited in claim 1, and further comprising collecting a plurality of the single records, and generating a distinct record including the collected data of each of the single records, wherein the distinct record represents each of the plurality of single records.
7. (Cancelled)
8. (Currently Amended) A computer program product for generating a single record reflecting multiple services for accounting purposes, comprising:
- (a) computer code for identifying a plurality of services carried out over a network;
  - (b) computer code for collecting data describing the plurality of services; and
  - (c) computer code for generating a single record including the collected data, wherein the single record represents each of the plurality of services;
- wherein the services include at least two services selected from a group consisting of a hypertext transfer protocol (HTTP) session, an electronic mail session, a multimedia streaming session, a voice over Internet Protocol (IP) session, a data communication session, an instant messaging session, a peer-to-peer network application session, a file transfer protocol (FTP) session, and a telnet session;
- wherein the data is collected utilizing an enhancement procedure defined utilizing a graphical user interface by:

-4-

listing a plurality of available functions to be applied  
in real-time prior to end-user reporting,

allowing a user to choose at least one of a plurality of  
fields, and

allowing the user to choose at least one of the listed  
functions to be applied to the chosen field in real-time prior to  
the end-user reporting.

- 
9. (Original) The computer program product as recited in claim 8, and further comprising computer code for sending the single record to a Business Support System.
  10. (Original) The computer program product as recited in claim 8, wherein the single record is used to bill at least one recipient of the services.
  11. (Original) The computer program product as recited in claim 8, wherein the plurality of services are received by a single party associated with the single record.
  12. (Original) The computer program product as recited in claim 11, wherein the single party is identified in the record.
  13. (Original) The computer program product as recited in claim 8, and further comprising computer code for collecting a plurality of the single records, and computer code for generating a distinct record including the collected data of each of the single records, wherein the distinct record represents each of the plurality of single records.
  14. (Cancelled)
  15. (Currently Amended) A system for generating a single record reflecting multiple services for accounting purposes, comprising:

-5-

- (a) logic for identifying a plurality of services carried out over a network;
- (b) logic for collecting data describing the plurality of services; and
- (c) logic for generating a single record including the collected data, wherein the single record represents each of the plurality of services;

wherein the services include at least two services selected from a group consisting of a hypertext transfer protocol (HTTP) session, an electronic mail session, a multimedia streaming session, a voice over Internet Protocol (IP) session, a data communication session, an instant messaging session, a peer-to-peer network application session, a file transfer protocol (FTP) session, and a telnet session;

wherein the data is collected utilizing an enhancement procedure defined utilizing a graphical user interface by:

listing a plurality of available functions to be applied in real-time prior to end-user reporting,

allowing a user to choose at least one of a plurality of fields, and

allowing the user to choose at least one of the listed functions to be applied to the chosen field in real-time prior to the end-user reporting.

16. (Original) The system as recited in claim 15, and further comprising logic for sending the single record to a Business Support System.
17. (Original) The system as recited in claim 15, wherein the single record is used to bill at least one recipient of the services.
18. (Original) The system as recited in claim 15, wherein the plurality of services are received by a single party associated with the single record.
19. (Original) The system as recited in claim 18, wherein the single party is identified in the record.

-6-

20. (Original) The system as recited in claim 15, and further comprising logic for collecting a plurality of the single records, and logic for generating a distinct record including the collected data of each of the single records, wherein the distinct record represents each of the plurality of single records.
21. (Cancelled)
22. (Currently Amended) A method for generating a single record reflecting multiple services, comprising:
- (a) collecting data with different formats describing a plurality of services;  
~~wherein the services are selected from the group consisting of an hypertext transfer protocol (HTTP) session, electronic mail session, a multimedia streaming session, and voice over Internet Protocol (IP) session;~~
  - (b) collecting data with different formats describing users of the services;
  - (c) generating a single record including the collected data representing each of the services and the users;
  - (d) collecting a plurality of the single records;
  - (e) generating a distinct record including the collected data of each of the single records, wherein the distinct record represents each of the plurality of single records; and
  - (f) sending the distinct record to a Business Support System;  
wherein the services include a hypertext transfer protocol (HTTP) session, an electronic mail session, a multimedia streaming session, a voice over Internet Protocol (IP) session, a data communication session, an instant messaging session, a peer-to-peer network application session, a file transfer protocol (FTP) session, and a telnet session;  
wherein the data is collected utilizing an enhancement procedure defined utilizing a graphical user interface by:  
listing a plurality of available functions to be applied in real-time prior to end-user reporting.

-7-

allowing a user to choose at least one of a plurality of  
fields, and

allowing the user to choose at least one of the listed  
functions to be applied to the chosen field in real-time prior to  
the end-user reporting.
